# Puppeteer

 run-checks **passing**[API](#) | [FAQ](#) | [Contributing](#) | [Troubleshooting](#)

Puppeteer is a Node library which provides a high-level API to control Chrome or Chromium over the [DevTools Protocol](#) . Puppeteer runs [headless](#) by default, but can be configured to run full (non-headless) Chrome or Chromium.

## What can I do?

Most things that you can do manually in the browser can be done using Puppeteer! Here are a few examples to get you started:

- Generate screenshots and PDFs of pages.
- Crawl a SPA (Single-Page Application) and generate pre-rendered content (i.e. "SSR" (Server-Side Rendering)).
- Automate form submission, UI testing, keyboard input, etc.
- Create an up-to-date, automated testing environment. Run your tests directly in the latest version of Chrome using the latest JavaScript and browser features.
- Capture a [timeline trace](#) of your site to help diagnose performance issues.
- Test Chrome Extensions.

## Getting Started

### Installation

To use Puppeteer in your project, run:

```
npm i puppeteer
# or "yarn add puppeteer"
```

Note: When you install Puppeteer, it downloads a recent version of Chromium (~170MB Mac, ~282MB Linux, ~280MB Win) that
